

ICUMS Simulator Detailed Screen Reference

What appears on each screen and what each field means

Training simulator only - not official ICUMS

This is a companion to the role-based user guide. It follows the current files and templates in the project, so labels may change as the interface develops. It describes the simulator's fictional training data, not official customs procedures.

How to use this reference

For every screen, first check the route or menu entry, then identify the fields, then read the expected result. If a field is not shown in the current browser screen, it is usually an administrator-only model field or a future extension.

Area	Typical screens covered	Primary role
Accounts and Admin	Users list, user detail, enrolment inline, groups	Administrator
Onboarding	Disclaimer page, programme and enrolment records	Student, Administrator
Learning and Progress	Roadmap, lesson, dashboard, orientation	Student, Instructor
Assessments	Assessment take, result, attempt evidence	Student, Instructor
Scenarios	Scenario list, detail, workspace, actions, hints	Student, Instructor
Evaluations	Evaluation result, feedback, revision	Student, Instructor
Reports	Completion record, certificate, policy	All roles
Audit	Audit event list and detail	Instructor, Administrator

Accounts and administrator screens

Users list

Route or entry point: Admin > Accounts > Users

Who uses it: Administrator

This page lists user accounts. Select a username to open that user's detail page.

Fields and controls

Item	What to enter or select	What happens
Search	Username or email (where enabled)	Narrows the list to matching accounts.
Username	Account login name	Opens the user detail form.
Email	Contact address	Used for identity and future communications; it is not a password.
Active / staff / superuser	Account status flags	Controls whether the account can sign in and whether it can use admin features; assign carefully.

What to expect

- The list is not the student learning dashboard.
- Use the username link to manage the account.

- Never share passwords or grant superuser access casually.

User detail

Route or entry point: Admin > Accounts > Users > select a username

Who uses it: Administrator

The user detail page combines account credentials, personal information, permissions, and enrolments.

Fields and controls

Item	What to enter or select	What happens
Username	Unique login name	Identifies the account and is used at sign-in.
Password	Set or change through the password control	Passwords are stored securely; the existing password is not displayed in readable form.
First name / Last name	Student or staff name	Appears in personalisation and certificates where available.
Email address	User's email	Stores contact information.
Active	Checked for a usable account	An inactive user cannot use normal sign-in.
Staff status	Checked only for admin users	Allows access to Django Admin when permissions also allow it.
Superuser status	Use only for trusted system owners	Grants all admin permissions; normally leave unchecked.
Groups	Student, Instructor, Administrator	Assigns role capabilities. A user may have multiple groups.
Enrolments inline	Programme version and status	Links the user to a published programme. Saving an enrolment automatically assigns Student and records the enrolling administrator.

What to expect

- The password field is for setting a password, not reading one.
- Role membership and enrolment are separate: a user may be Instructor without being enrolled as a student.
- Use Save and continue editing if you want to confirm the inline enrolment.

Enrolment inline

Route or entry point: Inside a user detail page

Who uses it: Administrator

Use this section to enrol a student without a command line.

Fields and controls

Item	What to enter or select	What happens
Student	Pre-filled with the current user	The account receiving the enrolment.
Programme version	Published programme version	Determines the modules, assessments, and completion policy available.
Status	Active, suspended, or completed	Active allows the normal learning journey; other statuses restrict access or describe history.
Enrolled by	Recorded automatically	Preserves which administrator created the relationship.

What to expect

- A student needs an active enrolment to see the roadmap and practical training.
- The Student group is assigned automatically when an enrolment is saved.
- Do not delete an enrolment to erase history; retain it and change status when appropriate.

Authentication and onboarding

Login

Route or entry point: /accounts/login/

Who uses it: All users

Enter credentials for the account created by an administrator.

Fields and controls

Item	What to enter or select	What happens
Username	Account username	Identifies the account.
Password	Account password	Checks the password securely.
Sign in	Submit button	Starts an authenticated session.

What to expect

- Invalid credentials return a safe error without revealing which value was wrong.
- After sign-in, the system may redirect to the disclaimer before the dashboard.
- Use Sign out when leaving a shared computer.

Simulator disclaimer

Route or entry point: /onboarding/disclaimer/

Who uses it: Student and any authenticated user who has not accepted the current version

Read the training notice and accept it before continuing.

Fields and controls

Item	What to enter or select	What happens
Disclaimer text	Read-only current notice	Explains that documents and transactions are fictional and not official ICUMS.
Accept	Confirmation button	Records acceptance against the current disclaimer version and creates an audit event.

What to expect

- A new disclaimer version can require acceptance again.
- Until accepted, protected training pages redirect here.

Learning and progress

Student dashboard

Route or entry point: /

Who uses it: Student

The dashboard is the starting point after the disclaimer.

Fields and controls

Item	What to enter or select	What happens
Enrolment banner	Current programme and status	Confirms which programme version is active.
Module cards	Module title, progress, next lesson	Links to the roadmap or lesson.
Final theory	Locked or available status	Shows whether module prerequisites are complete.
Orientation	Locked or complete status	Becomes available after a passed final theory assessment.
Practical	Locked or available status	Becomes available after orientation.
Training record	Completion status and certificate link	Appears when a qualifying completion record exists.

What to expect

- The dashboard is a progress summary, not an admin configuration screen.
- Locked actions explain which prerequisite is missing.

Roadmap and lesson

Route or entry point: /learning/ and /learning/<module>/<lesson>/

Who uses it: Student

The roadmap lists published modules. A lesson displays ordered content blocks and any embedded knowledge check.

Fields and controls

Item	What to enter or select	What happens
Module card	Title and completion state	Opens the first available lesson.
Content block	Notice, text, checklist, or other published block	Marks the learner's place as they progress.
Knowledge check	Select an answer and submit	Shows immediate correctness and explanation; responses remain recorded.
Complete lesson	Completion control	Records lesson progress and unlocks the next lesson when prerequisites are met.
Resource link	Remediation or reference resource	Returns the learner to targeted support content.

What to expect

- Leaving and returning restores the saved position.
- Unpublished content is not shown to students.
- Fictional examples are labelled as training-only.

Orientation

Route or entry point: /orientation/

Who uses it: Student

Orientation confirms that the student understands the simulator workspace before practical access.

Fields and controls

Item	What to enter or select	What happens
Orientation summary	Read-only instructions	Explains the practical workspace and simulator boundaries.

Item	What to enter or select	What happens
Complete orientation	Confirmation button	Records orientation_completed_at and an audit event.

What to expect

- Orientation is available only after final theory is passed.
- Completing it unlocks Scenarios.

Assessments

Assessment take

Route or entry point: /assessments/<assessment-id>/

Who uses it: Student

Start or resume an untimed module or final-theory attempt.

Fields and controls

Item	What to enter or select	What happens
Question prompt	Read-only frozen question	The question set is frozen when the attempt begins.
Answer options	Select one available answer	Stores the selected response for this attempt.
Submit	Submit all answers	Calculates score and pass/fail; the attempt becomes read-only.
Attempt number	Displayed or implied	Each retry creates a new numbered attempt; older evidence remains.

What to expect

- The final theory assessment stays locked until published module lessons are complete.
- Elapsed time may be recorded but never changes the score.
- Incorrect answers may link to remediation resources.

Assessment result

Route or entry point: /assessments/attempts/<attempt-id>/

Who uses it: Student and Instructor

Review the submitted score, outcome, responses, and remediation.

Fields and controls

Item	What to enter or select	What happens
Score and percentage	Calculated result	Shows points earned and the percentage.
Outcome	Pass or fail	Determines whether the next programme milestone is unlocked.
Response review	Selected answer and explanation	Explains correct and incorrect responses.
Remediation	Linked lesson or resource	Provides a targeted next step after a weak result.

What to expect

- A failed attempt is retained and does not block a permitted retry.

- A passed final theory attempt unlocks orientation.

Scenarios

Scenario list and detail

Route or entry point: /scenarios/ and /scenarios/<version-id>/

Who uses it: Student

The list shows published practical scenarios available after orientation.

Fields and controls

Item	What to enter or select	What happens
Scenario title	Published scenario name	Opens the briefing page.
Purpose	Practice, module assessment, or competency	Explains whether the scenario is practice or can contribute to completion.
Assistance mode	Beginner, Intermediate, Advanced, or Competency	Explains whether hints or guidance are available.
Start or resume	Action button	Creates a new saved attempt or returns to an in-progress attempt.

What to expect

- The guided fictional Import scenario is practice-only.
- The independent competency scenario does not provide hints.
- Scenario rules are conceptual until approved reference material is supplied.

Scenario workspace

Route or entry point: /scenarios/attempts/<attempt-id>/

Who uses it: Student and Instructor

The workspace is the practical transaction screen.

Fields and controls

Item	What to enter or select	What happens
Current state	Read-only workflow stage	Shows where the attempt currently is.
Fictional documents	Learner-visible fields and references	Provides safe training records; evaluator-only data is hidden.
Available actions	Buttons valid for the current state and conditions	Performs a transition and records before/after state evidence.
Parallel actions	Actions with no main state transition	Allows independent shipping-line work when conditions are met.
Hint	Beginner assistance control	Records an assistance event; unavailable in Advanced and Competency modes.
Action history	Sequence, action code, prior state, new state	Shows the append-only evidence trail.

What to expect

- The workspace saves after actions and can be resumed.
- Unavailable actions are usually waiting for a prerequisite or the correct state.
- A terminal state completes the attempt and triggers evaluation.

Evaluations

Practical evaluation

Route or entry point: /evaluations/<evaluation-id>/

Who uses it: Student and Instructor

The result page explains how the completed scenario was scored.

Fields and controls

Item	What to enter or select	What happens
System score	Points and percentage	Calculated from the published rubric version.
System outcome	Automatic pass or fail	Preserved even if an instructor later revises the effective result.
Effective outcome	Current pass or fail	The outcome used for downstream completion decisions.
Criterion results	Passed/unmet criteria, evidence, feedback	Explains strengths and weaknesses.
Instructor feedback	Visible or private notes	Visible notes help the student; private notes remain instructor-only.
Revision history	Original outcome, revised outcome, reason, actor, timestamp	Makes an override auditable.

What to expect

- Elapsed time is informational only.
- Mandatory failures can fail an evaluation even when the percentage is high.
- Only authorized instructors or administrators can revise outcomes.

Reports and certificates

Completion record

Route or entry point: /records/completion/<completion-id>/

Who uses it: Student, Instructor, Administrator

Shows whether the student has met the programme completion gate.

Fields and controls

Item	What to enter or select	What happens
Status	Pending instructor approval or Completed	Shows whether a certificate can be issued.
Programme	Programme name and version	Identifies the training completed.
Qualifying scenario	Competency scenario title	Confirms that the result came from a competency-purpose practical.
Practical result	Effective outcome and system score	Summarizes the qualifying evaluation.
Approve completion	Instructor-only action when policy requires it	Completes the record, records the approver, and issues the certificate.

What to expect

- Completion requires final theory pass, orientation, and passed competency practical.
- Practice-only results do not create completion.

- Evidence and policy snapshots are retained for auditability.

Certificate

Route or entry point: /records/certificates/<certificate-id>/

Who uses it: Eligible Student, Instructor, Administrator

Displays a printable simulator-training certificate.

Fields and controls

Item	What to enter or select	What happens
Certificate number	Unique identifier	Can be used to distinguish the simulator record.
Student name	From the user profile	Uses full name where supplied, otherwise username.
Programme and date	From the completion record	States what simulator programme was completed and when.
Print	Browser print control	Opens the normal print dialog.

What to expect

- The certificate permanently states TRAINING SIMULATOR - NOT OFFICIAL ICUMS.
- Issuance is idempotent: retrying does not create duplicates.
- It is not a government-issued qualification.

Audit and evidence

Audit events

Route or entry point: Admin > Audit > Audit events

Who uses it: Instructor and Administrator

Audit is a read-only trail of important actions.

Fields and controls

Item	What to enter or select	What happens
Actor	User who performed the action	Identifies who signed in, enrolled, revised, or approved.
Action code	Machine-readable event type	Groups events such as login, disclaimer.accepted, enrolment.created, practical_evaluation.revised, and completion.approved.
Target	Object type and ID	Identifies what the event affected.
Summary	Human-readable description	Explains the event without replacing the underlying record.
Timestamp and IP	When and from where available	Supports review and incident investigation.

What to expect

- Audit entries are append-only.
- Students normally do not edit or manage audit records.
- Use the audit trail to explain a decision; do not use it to change a result.

Administrator content and policy screens

Admin area	What you configure	What to verify before publishing
Programmes and versions	Programme identity, version, status	Correct version is published and assigned to the intended students.
Modules and lessons	Order, titles, blocks, resources, checks	Prerequisites and fictional labels are clear.
Questions and assessments	Question versions, options, pass percentage, attempt limits	Question set is complete and final assessment is untimed.
Scenarios	Scenario version, purpose, assistance mode, states, actions, conditions, documents	Exactly one initial state, terminal path, and learner/evaluator data separation.
Rubrics and criteria	Points, mandatory flags, pass threshold, remediation	Criteria are evidence-based and still marked demonstration until approved.
Completion policy	Active flag, certificate template version, instructor approval switch	Only qualifying competency results can complete the programme.
Completion and certificates	Read-only evidence records	Never edit to correct history; use approved policy or revision workflows.

Troubleshooting by symptom

Symptom	Likely reason	Next check
I am redirected to the disclaimer	Current disclaimer has not been accepted	Open Onboarding and accept the current notice.
The roadmap is empty	No active enrolment or no published modules	Ask an administrator to verify the user enrolment and programme version.
Final theory is locked	Published module lessons are incomplete	Review Progress and complete each required lesson.
Practical is locked	Orientation is incomplete	Pass final theory, open Orientation, and complete it.
An action is unavailable	State or condition is not satisfied	Read the current state, documents, and parallel work requirements.
No certificate appears	Completion prerequisites are not all satisfied or approval is pending	Check final theory, orientation, competency evaluation, and completion policy.
Admin page is unavailable	Account lacks staff/admin permission	Ask an administrator to review groups and staff status.

Support boundary

This reference explains the current implementation. It does not replace approved customs procedures, official ICUMS training, or subject-matter review. If a screen or label conflicts with approved requirements, record the issue and ask the administrator or product owner before changing a published scenario, rubric, or certificate policy.
